

# Upgrade performance

If you need to run any of these tasks:

- Create large reports
- Run IDE(s) like Visual Studio, Android Studio, Adobe Collection Suite, so on
- Run administrative applications
- Run custom applications which handle a high level of complexity
- Run corporate software
- Run freeware software
- Run corporate motor of database which executes processes highly expensive in memory usage terms

And you need to improve the company servers performance, you should do the following:

- ➔ Increase amount of memory
- ➔ Increase disk storage
- ➔ Hire a private company that offers a physical appropriate space to hold the servers
- ➔ Upgrade Intel/AMD processor version
- ➔ Hire a cloud service as Amazon Web Service, Microsoft Azure, Google Platform Cloud
- ➔ Hire a private cloud storage so that it can be used to save non-confidential documents or files
- ➔ Add new servers if it were necessary
